

Labs / Spoof!

Easy

Welcome to our next CTF challenge! This challenge will test your skills in bypassing security restrictions. Here's what you need to know:

Steps to Success

1. **Start the Machine:** Begin by running the provided virtual machine.
2. **Explore the Application:** Investigate the web application thoroughly.
3. **Complete Tasks:** Follow the tasks to gather clues and progress through the challenge.

Hint

- **IP Restrictions:** Look for ways to bypass IP restrictions.
- **Restricted Areas:** Accessing IP restricted areas is key to finding the flag.

Completing [this course on IP spoofing](#) may be beneficial for this challenge.

Goal

Your goal is to find the hidden flag, which is a UUID located in a `flag.txt` file at the root of the server. Use your skills and creativity to uncover it. Good luck and have fun!

↺ Reset Machine

☐ Stop Machine

🔄 Creating Instance

the website outputs as follows

TechSolutions

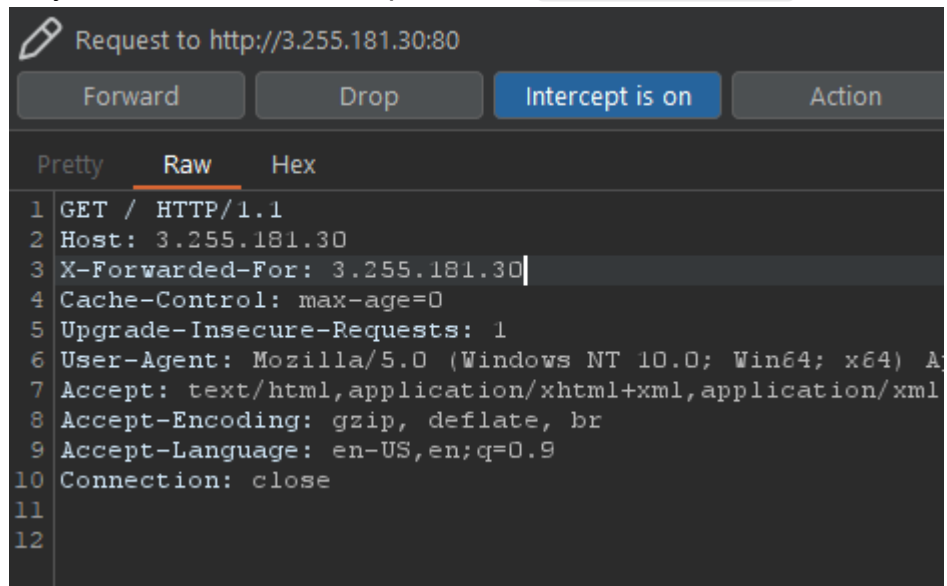

Your IP: ~~92.263.111.111~~

You are **not** connecting from company network (3.255.181.30).

Password is required of external access.

Login

so you will need to use burp suite to `X-Forwarded-For`

then forward it and you will get the flag :)
