Question

```
undefined8 main(EVP_PKEY_CTX *param_1)

{
  long in_FS_OFFSET;
  char *local_30;
  size_t local_28;
  FILE *local_20;
  char *local_18;
  long local_10;

  local_10 = *(long *)(in_FS_OFFSET + 0x28);
  init(param_1);
  local_20 = fopen("./flag.txt","r");
  local_28 = 0x50;
  getline(&local_30,&local_28,local_20);
  puts("Heard there is a big dawg in town ?");
  printf("Do you know where he is ? ");
  __isoc99_scanf(&DAT_00102057,local_18);
  puts("All you have to say is this, huh:");
  printf(local_18);
  if (local_10 != *(long *)(in_FS_OFFSET + 0x28)) {
                    /* WARNING: Subroutine does not return */
    __stack_chk_fail();
  }
  return 0;
}
```

getline puts a pointer to the flag on the stack, you should be able to print it with `printf("%7$s")`
